Atriums, Orangeries, Glass houses,  
Conservatories and Home extensions

# Inside...

## Bespoke glass buildings for distinctive homes

*A well built and well designed home addition - featuring the Quantal aluminium roofing system adds value and more importantly enhances your lifestyle. Browse through the brochure to see the wide range of ways to add space to your home.*

### Space

Architectural solutions to suit your home and personal style.

### Living

A room in which to relax, entertain or work.

### Expression

An individual design to add a unique feature to your home.

### Style

Engineered solutions from a wide range of finishes and flexible systems.

# Space...

Nothing brings you closer to the great outdoors than a glass-roofed conservatory and with the superior thermal properties of our products you can enjoy your space all year round.

It is, quite simply, the most effective way of expanding your living space and enhancing the value of your home.

Cuddle up to watch the rain on a winter's night. With insulating, double glazing and draught free conservatories you can do so warm and snug inside.

There is little to compare with a British garden in summertime, but alas you still must compete with the weather.

At least with the Quantal system you can enjoy more of the view, thanks to our sleek, uncluttered designs.

Quite simply our bespoke conservatories add a new dimension. Make the world your living space!

# Living...

“Soft music, soft light, a glass or two.  
Your sanctuary awaits at the end of another day”

The high level of glazing brings the feel and enjoyment of “al fresco” living into your home, every day and all year round.

Can you imagine a more refreshing space in which to relax, entertain or work?

Using the patented Quantal system we can realise intricate designs and fantastic detailing on your behalf.

Bespoke glass buildings have never looked better.

## Relax, reflect or entertain

Our garden rooms provide an inspiring space in which to relax, dine or entertain; one that is every bit as comfortable, stylish and well-appointed as the rest of your home.

Because of our high specifications and flexible approach we can

incorporate sophisticated features into our glass buildings, ranging from luxury fitted kitchens to complex, ornamental roofs.

When design elegance meets advanced engineering, anything is possible.

# Expression...

Make a space that's yours,  
a space in tune with your lifestyle.

From a simple living space to a shining ballroom or refectory, our systems have the strength and flexibility to meet your needs.

No other system delivers more. Choose from a wide choice of window styles to give you the look and function you want.

A glass room? An atrium? An orangery?  
What could we add to your home?

Blending traditional with contemporary is very fashionable and more importantly it works! Just see what a difference a stunning glass atrium, lantern roof or orangery for example could make to your home.

Of course it needs to be done carefully, choosing the right materials and the right features. We can show you how.

Blend in your new space or do the opposite: make it a real feature of your home.

Our glass buildings are snug in the winter but thanks to our use of solar glass they will keep you cool in summer.

Roof lights and ventilation systems help to keep the temperature down, so you can still relax and enjoy when the heat is on!

We have the system and know how to build your vision - so let your imagination run wild.

By carefully matching styles and materials we will create a solution that is a seamless continuation of your home, inside and out.

For the glazed sections our paint shop can match virtually any colour for your aluminium frames and roof.

Every detail, from window types to roof crests, can be designed and built to blend or contrast.

Our glass buildings perform brilliantly under the bluest skies. Solar glass and automatic roof vents will keep you cool, whilst outside the decorative detail is beautifully realised in pressure cast aluminium.

Your conservatory will look superb for years to come and is complemented by a comprehensive warranty.

Brickwork can be carefully matched and interwoven with the glazing to create a sympathetic look.

Make our beautiful buildings part of your home!

# Style...

Loggia - create a space as individual as you are & make your own style statement.

**For any design to stand out,  
we believe it has to be  
outstanding in every way.**

That is the secret of Loggia. Externally, or internally, from an outdoor perspective or from the more relaxed view from your sofa, you'll soon become aware that you are seeing superior design, superbly crafted.

Loggia is an exciting new technology featuring powder coated columns, twice as insulated as brick piers. So, whether your home is modern or traditional, Loggia will enhance your property and complement it perfectly. It can even be added as a standalone feature building, such as an office or contemporary living space.

Unlike conventional conservatories, it also comes in its own distinctive Loggia colour palette of classic white, pure cream, urban grey and landmark green or choose a fully bespoke colour.

A further design masterstroke which provides you with total flexibility, raising the possibility of complete harmonisation with your property, is the ability to have either a glazed roof or highly insulated tiled or slate roof called realROOF. It's your choice.

# And now... Quantal's outdoor living range

Pergola is part of the evolving outdoor living range. It can be used to create a stunning patio area or indeed could be used as a car port at the side of the home. At the heart of the system is a curved powder coated beam supported on matching posts. The aluminium is powder coated white or grey and will match into the majority of UK homes but you could choose a special colour if that is your preference.

Pergola comes in a variety of sizes to fit seamlessly into the existing elevations of your home.

And so, make the most of the great outdoors with pergola from Quantal.
